1 Scope

1.1 Identification

This document applies to InsightCloud Version 0.4 Beta Dated 06/09/2015.

1.2 System Overview

The DigitalGlobe InsightCloud combines an open data processing environment with powerful geospatial analytic algorithms and easy to use tools. The result is that our customers are able to cost effectively exploit massive amounts of location data in near real-time. The InsightCloud abstracts data management, application logic, and the user experience. Our customers can fuse DigitalGlobe Geospatial Big Data™ with their native and 3rd party sources. Experts can design custom Map Algebra algorithms within our framework and our Open APIs enable our analytics to integrate into end user workflows.

Insight Explorer	A portfolio of “easy button” analytic applications that enable interactive mission planning and collaborative mapping at global scale
GBD Analytic Toolkit	A portfolio of geospatial analytic tools that enable interactive analysis of massive volumes of raster and vector data to enable mission planning, predictive modeling, and real-time situational awareness. The GBD Analytic Toolkit leverages the core algorithms of Signature Analyst™ a patented tool that discover unseen patterns in spatial data.
Geospatial Data Hub	A big data processing and exploitation environment built on the Cloudera Enterprise Data Hub that has been adapted to process and exploit high resolution imagery, terrain, map features, human geography, movement tracks, and social media at global scale.

InsightCloud can be delivered via an On-Premise or Software as a Service (SaaS) model. Our On-Premise solution operates within the emerging IC ITE and DCGS Architectures. Our SaaS model runs in the Amazon Cloud and our Classified Datacenter in Herndon, VA.

3 CAS Authentication

The following is a sample Groovy script that walks through the authentication and access steps for users who want to access our data via direct calls through REST services. Before running the script, users may need to import the insightcloud.digitalglobe.der cert into the JRE cacerts file by downloading the cert and running this command:

```
sudo keytool -import -trustcacerts -alias insightcloud.digitalglobe.der -file
/home/<user>/insightcloud.digitalglobe.der -keystore /usr/lib/jvm/java-7-
oracle/jre/lib/security/cacerts
```

The sample Groovy script:

```
import java.io.IOException
import java.util.logging.Logger
import java.util.regex.Matcher
import java.util.regex.Pattern
import org.apache.commons.httpclient.HttpClient
import org.apache.commons.httpclient.NameValuePair

4 External REST calls

The following are examples of the interaction between the UI and the external services REST calls that are triggered by each widget.

4.1 Terrain

4.1.1 Comms

The Comms widget provides the analyst with a visual output of radio frequency propagation using a set of criteria and an available DEM. It calculates radio frequency propagation loss against surrounding terrain based on Longley-Rice Irregular Terrain Model algorithm for radio frequency propagation loss. RF propagation result is filtered based on a supplied maximum path loss. The end result for each cell is the number of cells within a radius of interest below or equal to the maximum path loss.

Supriyadi. \"But it seems like it is hard to beat the weather.\" \n\"The search operation will expand by about 185 square kilometers (71 square miles), search and rescue chief Henry Bambang Soelistyo said.\nIndonesia has suffered a string of accidents in recent years. It deregulated its aviation industry in the 1990s, and dozens of new carriers have made air travel affordable for the first time for many in the world's fourth most populous nation.\nExperts say poor maintenance, rule-bending and a shortage of trained personnel are largely to blame. Infrastructure has also failed to keep pace with exploding demand.\n\"The country's transportation ministry cracked down Monday after it was discovered that Flight 8501 did not have a permit to fly between Surabaya, Indonesia, and Singapore on the day of the crash. The ministry suspended several officials, including the airport operator and those who were in the control tower.\nAll AirAsia flights on that route also have been canceled, pending an investigation.\nIt is not known what caused the Airbus A320 to crash into the Java Sea 42 minutes after takeoff, though Indonesia's Meteorology, Climatology and Geophysics Agency says bad weather appears to have been a factor.\nJust before losing contact, the pilot told air traffic control he was approaching threatening clouds, but was denied permission to climb to a higher altitude because of heavy air traffic. No distress signal was issued.\nSonar has identified five large objects that are believed to be pieces of the fuselage on the ocean floor, but strong currents, silt and mud have kept divers from seeing or reaching the objects.\nNo pings have been detected from the plane's all-important cockpit voice and flight data recorders. That's because high waves have prevented the deployment of ships that drag ping locators. The batteries in the pingers on the black boxes are likely to go dead in about 20 more days.\n\"We are confident that rescuers would be able to locate them in time,\" said Nurcahyo Utomo, an investigator for Indonesia's National Committee on Transportation Safety.\n\"The search for the remaining 125 bodies has been exhausting for family members anxiously waiting to identify and bury their loved ones.\nEight Islamic clerics flew in a helicopter over the site Monday and scattered rice into the sea, a local tradition, and prayed for those who perished.\nAssociated Press writers Niniek Karmini and Ali Kotarumalos in Jakarta contributed to this report.\nCopyright 2015 The Associated Press. between Pakistan, India\nTweet\nWASHINGTON – The United States on Monday
expressed concern over rising Pakistan-India tensions and the exchange of fire along the
working boundary, which has claimed four Pakistani civilian lives.\nState Department
spokesperson Jen Psaki said that Washington encourages Islamabad and New Delhi to
engage in a dialogue. “We certainly remain concerned and watch over tensions along the
border. We encourage dialogue between the (two) countries,” Psaki said, when the issue
of flare-up in border tensions between Pakistan and India was raised at the daily
briefing.\nWhen her attention was drawn to the reports of four Pakistanis deaths in Indian
fire in Sialkot sector, the spokesperson said that she did not have any confirmation but
added the US would obviously sympathise with families on loss of any lives. “Our hearts
will go out to the families for any lives lost,” he added. In response to another question,
the spokesperson noted that Washington has been supporting dialogue between
Islamabad and New Delhi.\nShe said that there have been some steps in the past and
positive exchanges over the years but obviously more work needs to be done. On US-
Pakistan Strategic Dialogue, she said that the two sides work on a range of issues
including counterterrorism and security issues.\n\n",

4.2.2 Unified Vector Index

The Unified Vector Index (UVI) provides the analyst with a tool for visually mapping all available vectors within a given aoi. Analysts may then refine the resulting vectors into a desired selection. These quickly polled and returned arrays of points, polylines, and polygons may then be used in further analytical studies of the area.

4.2.2.2.7 List Available Geometries Matching A Given Query

Basic call format: <https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/esri/query/geometries?q={query}&left={value}&right={value}&upper={value}&lower={value}>

1. Submit a GET request to retrieve InsightCloud ESRI UVI information. The REST call via monocle-3 application will look similar to the following:
<https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/esri/query/geometries?q=highway&left=32.3964&right=37.2633&upper=42.631&lower=34.7208>
2. If this is the first request of the session, user will be redirected to the CAS authentication page; enter credentials and CAS will redirect to the response (see 3.)
3. The GET call returns a response with a header of 200 OK and a body of:

```
{
  "data": [
    {
      "name": "PolyLine",
      "count": 106

#### 4.2.2.2.11 Retrieve Page of Vector Items by Type (GET)

Basic call format: <https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/esri/{source}/{geometry}/{type}/paging?left={value}&right={value}&upper={value}&lower={value}&ttl={value}&count={value}>

1. Submit a GET request to retrieve InsightCloud ESRI UVI information. The REST call via monocle-3 application will look similar to the following:  
<https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/esri/OSM/Point/Tower/paging?left=32.3964&right=37.2633&upper=42.631&lower=34.7208&ttl=5m&count=500>
2. If this is the first request of the session, user will be redirected to the CAS authentication page; enter credentials and CAS will redirect to the response (see 3.)
3. The GET call returns a response with a header of 200 OK and a body of:

```

#### 4.2.2.2.12 Retrieve Page of Vector Items (POST)

1. Submit a POST request to retrieve InsightCloud ESRI UVI information. The REST call via monocle-3 application will look similar to the following:

<https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/esri/paging>

With a header Content-type:application/x-www-form-urlencoded and a body of the paging ID generated in Section: Retrieve Page of Vector Items by Type (GET) or in Section: Retrieve Page of Vector Items by Type and Query (GET)

2. If this is the first request of the session, user will be redirected to the CAS authentication page; enter credentials and CAS will redirect to the response (see 3.)
3. The GET call returns a response with a header of 200 OK and a body of:

```

#### 4.2.2.3.11 Retrieve Page of Vector Items by Query (GET)

Basic call format: [https://iipbeta.digitalglobe.com/monocle-](https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/vectors/query/paging?q={query}&left={value}&right={value}&upper={value}&lower={value}&ttl={value}&count={value})

[3/app/broker/vector/api/vectors/query/paging?q={query}&left={value}&right={value}&upper={value}&lower={value}&ttl={value}&count={value}](https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/vectors/query/paging?q={query}&left={value}&right={value}&upper={value}&lower={value}&ttl={value}&count={value})

- Submit a GET request to retrieve InsightCloud UVI information. The REST call via monocle-3 application will look similar to the following:  
<https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/vectors/query/paging?q=building&left=32.3964&right=37.2633&upper=42.631&lower=34.7208&ttl=5m&count=500>
- If this is the first request of the session, user will be redirected to the CAS authentication page; enter credentials and CAS will redirect to the response (see 3.)
- The GET call returns a response with a header of 200 OK and a body of:

```

#### 4.2.2.3.12 Retrieve Page of Vector Items by Type (GET)

Basic call format: [https://iipbeta.digitalglobe.com/monocle-](https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/vectors/{source}/{type}/paging?left={value}&right={value}&upper={value}&lower={value}&ttl={value}&count={value})

[3/app/broker/vector/api/vectors/{source}/{type}/paging?left={value}&right={value}&upper={value}&lower={value}&ttl={value}&count={value}](https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/vectors/{source}/{type}/paging?left={value}&right={value}&upper={value}&lower={value}&ttl={value}&count={value})

1. Submit a GET request to retrieve InsightCloud UVI information. The REST call via monocle-3 application will look similar to the following:  
<https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/vectors/OSM/Tower/paging?left=32.3964&right=37.2633&upper=42.631&lower=34.7208&ttl=5m&count=500>
2. If this is the first request of the session, user will be redirected to the CAS authentication page; enter credentials and CAS will redirect to the response (see 3.)
3. The GET call returns a response with a header of 200 OK and a body of:

```

#### 4.2.2.3.13 Retrieve Page of Vector Items (POST)

1. Submit a POST request to retrieve InsightCloud UVI information. The REST call via monocle-3 application will look similar to the following:

<https://iipbeta.digitalglobe.com/monocle-3/app/broker/vector/api/vectors/paging>

With a header Content-type:application/x-www-form-urlencoded and a body of the paging ID generated in Section: Retrieve Page of Vector Items by Type (GET) or in Section: Retrieve Page of Vector Items by Type and Query (GET)

2. If this is the first request of the session, user will be redirected to the CAS authentication page; enter credentials and CAS will redirect to the response (see 3.)

3. The GET call returns a response with a header of 200 OK and a body of:
